

## A small power pack

An Espresso is very versatile: It is an ideal small break in the routine, a delicious end after a meal or a stimulating fresh kick in the morning. The traditional way of preparing Espresso still provides an excellent, intensive Espresso – perfect for the Italian moment in life.

Cloer offers with its new compact Espresso Maker 5918 an easy option requiring no stove to prepare this beloved hot drink. Three Espresso cups will be easily prepared with the electric Espresso Maker 5918, which has a capacity of 150 ml. Moreover, the water level indicator makes possible an individual dosage for stronger or softer Espresso.

Classic appeal, safe equipment - the 5918 is presented like this: with a safety valve that offers additional protection during the brewing of this stimulant beverage. This valve avoids overpressure in the water container. The use of the high-quality Espresso Maker is very simple: after filling the water lower container, you just need to introduce the espresso grounds into the provided sieve and set the jug. Now you can activate the switch to turn on the machine. The appliance will automatically switch off after the process - a typical feature from Cloer. Another security advantage is the smooth thread: This way, both parts of the Espresso Maker can be connected and firmly sealed. The 360° central contact allows putting on and taking off the Espresso Maker in every position. Preparing Espresso could not be easier!

The electric Cloer Espresso Maker 5918 convinces the lovers of the traditional Espresso preparation thanks to its performance and tasty coffee.

The big friend of the 5918 is the Espresso Maker 5928 from the company Cloer. It has found numerous followers during the years thanks to its capacity of 6 cups.

Both appliances are available in specialist shops, electronic centers as well as big stores and online portals.
