

Crystal clear purism

With the new Kettle 4429 by Cloer boiling water will be an aesthetic puristic matter. The 4429 convinces with its minimalistic elegance and transparent material language: The water container made of glass allows a direct perspective of the bubbling water; the stainless steel coating provides the perfect frame for this timeless kitchen helper.

This way, the new Kettle will fit easily and with sophistication in every kitchen environment – also in the workplace or at the office.

The casual lightness of the 4429 with 1,7 l capacity goes hand in hand with the typical quality and safety features from Cloer. Starting with the locked safety lid, that will be opened by pressing switch button, the control light or the protection in case of overheating or dry-boil.

It is also clear, that the Kettle will automatic switch off after the process (as is to be expected from Cloer). The 360° central contact allows putting on and taking off the Kettle in every position. This detail should not be underestimated specially in small rooms with restricted space; it also allows equally possibilities for left- and right-handers.

Some more details: The 4429 has a silicone spout, that prevents the intrusion of dust in the kettle and the LED light gives a practical note to the appliance – it will be seen right away when the kettle is working. Small details make this 4429 to a perfect big one.

The Kettle 4429 is available in specialist shops, electronic centers as well as big stores and online portals.

NEW!

GLASS
